Ball float steam trap
ANSI150 / 300

- with flanges (Fig. 63A....1)
- with screwed sockets (Fig. 63A....2)
- with socket weld ends (Fig. 63A....3)
- with butt weld ends (Fig. 63A....4)

Forged steel
Stainless steel
Fig. 63A

Page 10

Features:

- Robust and resistant to water-hammer
- Integrated non return protection
- Mounting position senkrecht or waagrecht
- The controller maybe changed without disturbing the pipe work
- Internal strainer
- Pressure test acc. to API 598

CONA®B/M/TD All-in-one:

- For discharging of slight to highly sub-cooled condensate
- Optimized design for quick installation
- Gasket-free sealing of the screwed cap

CONA®S All-in-one:

- Back pressure-free condensate discharge
- Rapid system start-up due to thermostatic airventing capsule

CONA® B All-in-one - Bimetallic steam trap with integrated inlet and outlet valves
(Forged steel, Stainless steel)

DIN/EN-Constructions refer to data sheet CONA®All-in-one

Types of connection Other types of connection on request.

- Flanges1 _____ acc. to ASME B16.5
- Screwed sockets2 _____ NPT thread acc. to ANSI B1.20.1 or Rp thread acc. to DIN EN 10226-1
- Socket weld ends3 _____ acc. to ASME B16.11
- Butt weld ends4 _____ ASME B16.25 (Note restriction on operating pressure / inlet temperature depending to design!)

Features

- Thermostatic steam trap with non-corrosive and robust water hammer proof bimetallic controller
- Mounting position senkrecht or waagrecht
- User-friendly handling, easy and quick access to the controller
- Automatic air-venting during start up and operation of the plant
- Non return protection
- With inside strainer
- Subcooling of condensate is continuously adjustable (observe the operation instructions)
- Maintenance simplified due to screwed cap without sealing
- The controller maybe changed without disturbing the pipe work

Controller (chooseable for operating range)

- Controller R13 uo to inlet pressure: 13 bar
- Controller R22 uo to inlet pressure: 22 bar
- Controller R32 uo to inlet pressure: 32 bar

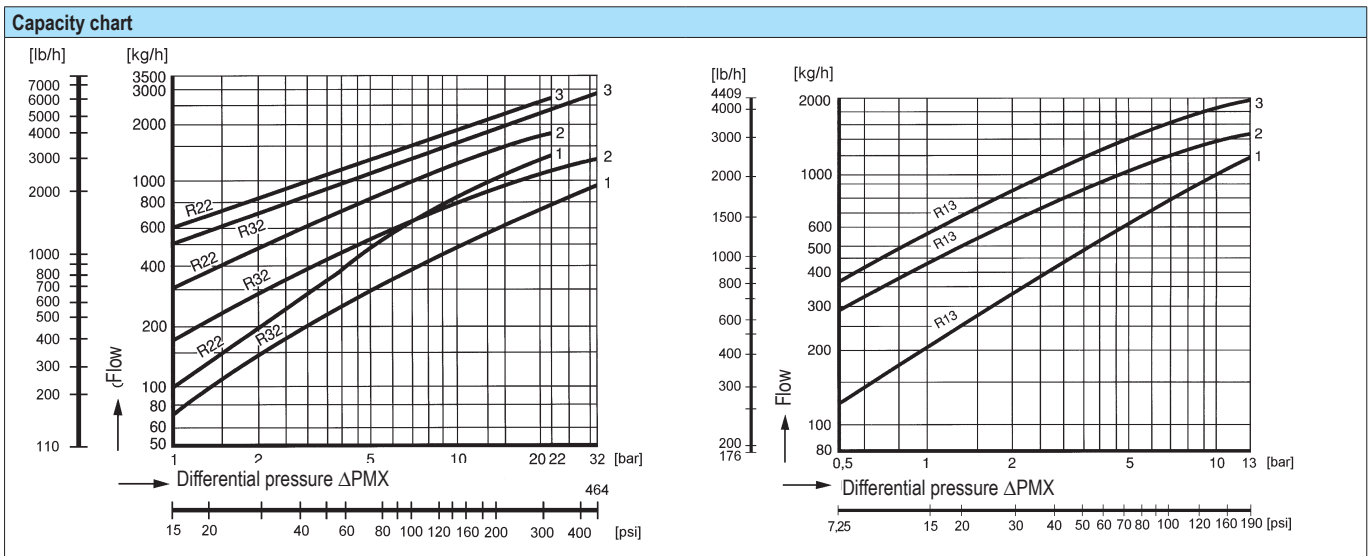

Options (Design refer to page 3)

- Drain valve (Pos. 51)
- Ball valve for blow down (Pos. 56)
- Stop valve with bellows seal (Pos. 8)

Information / restriction of technical rules need to be observed!
 Operating and installation instructions can be downloaded at www.ari-armaturen.com.
 Resistance and fitness must be verified (or contact the manufacturer for information).

The capacity chart shows the maximum capacity at factory setting..
Curve 1: Maximum flow of hot condensate at approx. 10 K below saturation temperature.
Curve 2: Maximum flow of sub-cooled condensate at approx. 30 K below saturation temperature (with back-up of condensate).
Curve 3: Maximum flow quantity of cold condensate at about 20°C (during start-up of a cold installation).
 The condensate temperature determines the opening of the controller. Capacity is increased with the sub-cooling temperature of the condensate.

Options		
 Drain valve	 Ball valve for blow down (restricted to 16 bar, 210°C)	 Stop valve with bellows seal

Types of connection

Other types of connection on request.

- Flanges1 _____ acc. to ASME B16.5
- Screwed sockets2 _____ NPT thread acc. to ANSI B1.20.1 or Rp thread acc. to DIN EN 10226-1
- Socket weld ends3 _____ acc. to ASME B16.11
- Butt weld ends4 _____ ASME B16.25 (Note restriction on operating pressure / inlet temperature depending to design!)

Features

- Thermostatic steam trap with noncorrosive and robust water hammer proofed capsule
- Mounting position senkrecht or waagrecht
- User-friendly handling, easy and quick access to the controller
- Non return protection
- With inside strainer
- Filter effect maximised at horizontal installation
- Optimized design for quick installation
- Maintenance simplified due to screwed cap without sealing
- The controller maybe changed without disturbing the pipe work

Capsule:

(chooseable for operating range)

- Capsule No. 1 _____ for condensate discharge at boiling temperature (only on request)
- Capsule No. 2 _____ for condensate sub-cooling about approx. 10 K (Standard)
- Capsule No. 3 _____ for condensate sub-cooling about approx. 30 K

Options

(Design refer to page 5)

- Drain valve (Pos. 51)
- Ball valve for blow down (Pos. 56)
- Stop valve with bellows seal (Pos. 8)

- Socket weld ends3 _____ acc. to ASME B16.11
- Butt weld ends4 _____ ASME B16.25 (Note restriction on operating pressure / inlet temperature depending to design!)

Features

- Thermodynamic steam trap with replaceable controller-unit and cap with heat chamber wich minimize the effects from the weather conditions to the function of the trap such as low ambient temperatures, rain, wind, etc..
- Mounting position senkrecht or waagrecht
- User-friendly handling, easy and quick access to the controller
- Intermittent mode of operation
- Heat chamber minimizes the impact of weather conditions on the trap's performance
- Robust and resistant to water-hammer
- Integrated non return protection
- With inside strainer
- Optimized design for quick installation
- Maintenance simplified due to screwed cap without sealing
- The controller maybe changed without disturbing the pipe work

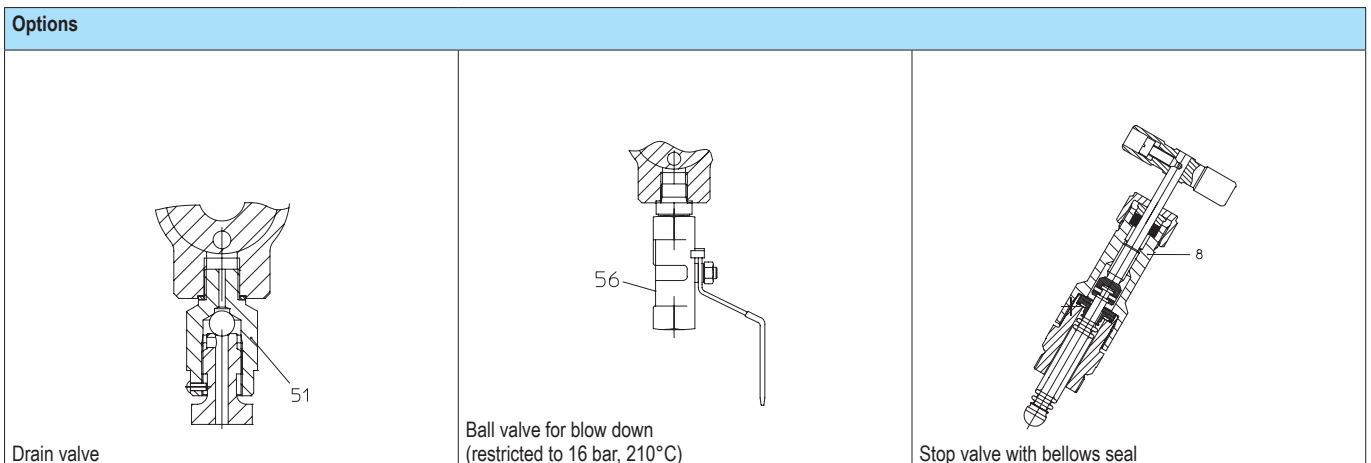

Options (Design refer to page 7)

Types of connection

Other types of connection on request.

- Flanges1 _____ acc. to ASME B16.5
- Screwed sockets2 _____ NPT thread acc. to ANSI B1.20.1 or Rp thread acc. to DIN EN 10226-1
- Socket weld ends3 _____ acc. to ASME B16.11
- Butt weld ends4 _____ ASME B16.25 (Note restriction on operating pressure / inlet temperature depending to design!)

Features

- Ball float steam trap with level control for the condensate-discharge from all kinds of steam systems
- Rapid system start-up due to thermostatic air venting capsule
- User-friendly handling, easy and quick access to the controller
- Immediate discharge of hot boiling condensat
- Discharge of great condensate quantities even at low differential pressure
- Body with flanged hood
- With inside strainer
- Non return protection
- The controller maybe changed without disturbing the pipe work

Mounting position:

- Standard: vertical
- Optional: horizontal with inlet from right or left

Please indicate when ordering!
Installation position may be changed on-site (see operating instructions).

Options (Design refer to page 3)

- Vent plug (Pos. 47)
- Plug (Pos. 50)
- Manual air vent valve (Pos. 51)
- Ball valve for blow down (Pos. 56)
- Stop valve with bellows seal

Informations about pipe welding
Welding groove acc. to DIN 2559

The material used for ARI valves with butt weld ends are: SA105

Note: SA182F321

Note restriction on operating pressure / inlet temperature depending to design!

Due to our experience, we recommend to apply an electric welding process.

Because of the different material compositions and wall thickness of the steam traps and the pipe gas welding shall not be applied. Quenching cracks and coarse grain structure may develop.

Steam traps with socket-weld ends shall only be welded by arc welding (welding process 111 acc. to DIN EN 24063).

If during the time of warranty others than the manufacturer or by the manufacturer authorized persons are interfering in the product and/or the setting, the right of claim for warranty will lapse!
